

I2I™ INCEPTION TO™ INSTALLATION

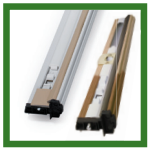

High-Performance Thresholds, Astragals, Weather Seals, Door Jambs and Security Locks

No other complete door solution will perform better or last longer. Imperial Products by Homeshield offers complete I2I™ entry door solutions that incorporate a tightly integrated mix of components designed to provide simplicity, improve energy performance and reduce or eliminate air and water infiltration.

From “Inception to Installation,” I2I™ components are a complete suite of entry solutions designed to complement and reinforce each other:

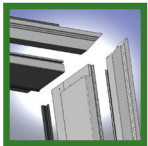

5Y Thresholds: High-performance thresholds that are constructed of natural-looking composite materials with cellular PVC adjustable risers. 5Y Thresholds are engineered to last using Imperial Products’ patented ImperiSeal™ continuous filament technology, providing optimal resistance to environmental stresses, moisture penetration and temperature changes.

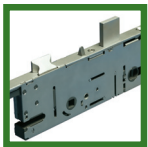

Triple Seal™ and StainRite™ French Door Astragals: Triple Seal™ astragals are consistently the highest performing and most durable astragal available because of Imperial Products’ patented Triple Seal™ design. StrainRite™ astragals offer the same performance characteristics and patented design, but are also stainable to match your door panels. All Imperial Products’ astragals maximize performance and offer smooth, one-step operation.

Weather Seals: Imperial Products’ Leading Edge™ Corner Pad, 2² Sweeps and EZ Pads are designed to augment and complement the performance of any threshold or astragal. These unique weather seals can save on labor, boost energy efficiency and work effectively, even in high-wind or stormy conditions.

ImperiClad™ Door Jamb System: The ImperiClad™ system is constructed using MikronWood™, an insect-proof and moisture-proof engineered composite material that provides superior energy efficiency and durability. The prefinished system eliminates the need for finishing with the added benefit of low-maintenance.

MPLS3 Three-Point Locking System: The MPLS3 locking system is made of 100-percent stainless steel to provide durability, weather resistance and security. The system is available in a variety of configurations and is engineered with a locking “tongue” system that works in opposing directions for maximum security and weather-stripping compression.

I2I components are certified, tested and guaranteed to not fail. With the exclusive I2I Guarantee, Imperial Products will repair or replace products that do not perform as expected.

Imperial Products by Homeshield, a Quanex Building Products company, offers a complete suite of high performance door products, including thresholds, astragals, weather seals, door jambs and multipoint locks that are designed to provide simplicity, improve energy performance and reduce or eliminate air and water infiltration.
