

# Uni-Temp Rolltrusion Glazing Bead

Up the performance of your glazing beads & accessories for all climates.

## The Issue - Performance of Glazing Beads & Accessories

- Customer expectations exceed industry consensus and specification for shrink in glazing beads and accessories

## Why is this happening?

- Increased efficiency in glazing
- Reflectance of much more solar energy from neighboring structures
- Fluctuating climate and temperatures
- Increased demand for darker exterior colors

## The Solution - Patent Pending High-Heat Rolltrusion Bead

- PVC clad bead with metallic stabilizer
- Can replace capped, painted, laminated accessories and beads in high heat/solar intense environments
- Thermal cycle tested with no shrinkage or deformation observed

\*The Uni-Temp Rolltrusion Glazing Bead is a patent-pending technology brought to you by the engineers at Quanex Building products.
