

Triple Seal™ & StainRite™ Astragals

Providing a lifetime of attractive, leak-free French doors

Low maintenance meets high performance with Quanex's precision-engineered Triple Seal™ and StainRite™ French Door astragals. Both systems have been tested and third-party confirmed as the most durable and best performing astragals available.

Proven, Long-Lasting Performance

Quanex's astragals consistently surpass PG40 air and water ratings because of the company's patented Triple Seal drive-on boot, which is used in both Triple Seal and StainRite Products. Numerous third-party tests have subjected this system to more than 5,000 cycles with no signs of wear, proving that the Triple Seal technology can withstand the elements to guarantee a long, leak-free product life – and unparalleled end-user satisfaction.

Easy to Install and Operate

Triple Seal and StainRite astragals feature a patent-pending adjustable strike plate base that provides easy adjustments with a unique ratcheting teeth system designed to keep the strike plate in place long-term. Security is also heightened with a locking thumb bolt operated by a simple quarter turn. With Quanex's astragal technologies, end-users will enjoy premium security and smooth, one-step operation, while manufacturers and installers can feel confident that the astragal will stay securely in place over time.

Stainable to Match Your Door Panels

Quanex's StainRite™ astragals are designed to combine beauty with low-maintenance functionality. These systems are stainable with a realistic wood appearance, but are constructed using a wood-grain vinyl wrap that is guaranteed not to rot, split or warp over time. StainRite astragals are available with oak or mahogany grain patterns and can be stained to match your door panels.

Quanex Building Products offers a complete suite of high-performance door products, including Imperial thresholds, astragals, weather seals, door jambs and multipoint locks that are designed to provide simplicity, improve energy performance and reduce or eliminate air and water infiltration.
