

FOR IMMEDIATE RELEASE:

## Quanex K2 Series Commercial Sliding Doors Bring Innovation to Demanding Applications

**HOUSTON, Oct. 31, 2023 (NYSE: NX)** — Quanex brings energy efficiency and durability to the commercial market with its high-strength, K2 series commercial vinyl sliding door systems.

Available in two-, three- and four-panel configurations up to 10 feet high and 20 feet wide, the K2 series door is designed to meet critical specifications for use in large sizes and where high structural ratings are a necessity. The door's vinyl extrusions accept standard aluminum or steel reinforcing, providing the stiffness and stability needed in high-load applications.

"As a technology, design and tooling leader, we take great pride in producing only the highest-quality window and door systems that meet or exceed the most stringent testing standards, and the K2 series commercial vinyl doors are a great example of our team's work," said Larry Johnson, vice president of sales, North American Fenestration, Quanex. "It is a true testament to our ability to work closely with our customers to create the best solutions for the market's demands."

The K2 series commercial vinyl sliding door has been thoroughly tested to AAMA standards, achieving an HC50 rating for 8-foot heights and a C35 rating for 10-foot heights in multiple-panel configurations. Its design includes equal glass and sightlines and multichambered profiles for strong welds and maximum thermal performance. It can accept multiple glazing options, such as monolithic or insulated, and utilizes a variety of hardware options. It is also ideally compatible with the Quanex Security Screen with Meshtech technology, where high-tensile mesh technology is combined with a multipoint lock and main patio door interlock to resist common forced entry tools used by intruders.

The K2 door series is available in configurations designed to meet Coastal Miami-Dade Impact Ratings and is well suited for residential architecture that demands large, multipanel sliding doors to maximize indoor-outdoor visibility. The K2 door is manufactured with long-lasting, .100"-thick-walled MikronBlend™ extrusions that will stand up to even the harshest weather conditions and will never pit, warp, rot, corrode, peel or crack.

The K2 door is available in a variety of popular colors. It incorporates Mikron's exclusive SuperCapSR™ technology, an innovative low heat-absorbing co-extruded color layer that reflects solar radiation away from the surface before it builds up excessive heat, provides superior durability and eliminates profile distortion.
