

FOR IMMEDIATE RELEASE:

Quanex Drives Continued Innovation for the Future of Fenestration With Super Spacer®

HOUSTON, Oct. 31, 2023 (NYSE: NX) — Backed by a longstanding history in warm-edge spacer technology, Quanex's Super Spacer® family of spacer products continues to help fenestration professionals everywhere achieve peerless thermal performance, durability and longevity in the world's most demanding applications.

More than 10 billion feet of Quanex warm-edge spacer have been used in homes, buildings, solar panels and refrigeration units around the world. For today's and tomorrow's needs across different markets and applications, Super Spacer remains the ideal choice for all your insulating glass (IG) needs.

Revolutionary Residential Performance

Quanex's **Super Spacer® Standard** spacer systems dependably deliver high performance for IG units, including excellent resistance to ozone, weathering, water and aging, while maintaining flexibility through wide environmental changes. It's an ideal spacer solution for residential IG construction, no matter the size of your business.

Quanex's **Super Spacer® Premium** spacer systems represent the ultimate choice for residential IG units, each backed by decades of performance in the field. Featuring outstanding thermal performance and long-term reliability, each system delivers on the demands of your most discerning customers.

Quanex's **Super Spacer® TG** was designed specifically to help window manufacturers more easily and reliably manufacture thin triple units. Providing the same high performance as Super Spacer Premium, Super Spacer TG features a unique center channel that securely holds the thin middle lite, creating a resilient and efficient IG unit for next-generation performance.

"Super Spacer Premium and Super Spacer TG can help manufacturers meet the most demanding thermal performance requirements, including the new criteria established by ENERGY STAR 7.0," said Larry Johnson, vice president of sales, North American Fenestration, Quanex. "We're always ready to help our customers identify the best way for their business to meet new performance standards."

Taking Commercial IG to New Heights

Providing a unique triple-seal design, **Super Spacer® TriSeal™** is the premium choice for commercial insulating needs, including silicone structural glazing. Found in architectural marvels all over the world, from the Eiffel Tower in Paris to the Museum of the Future in Dubai, Super Spacer TriSeal incorporates an inner acrylic adhesive seal for immediate unit handling, a polyisobutylene primary seal for enhanced gas retention and low moisture vapor transmission, and an outer silicone seal for proven structural strength and superior durability.

"Super Spacer is a premium energy-efficient and sustainable solution for high-volume production of dual- and triple-pane commercial IG units," Johnson said. "As architectural applications grow bolder, manufacturers can trust its inherent flexibility and superior performance."

Making Manufacturing Easier

Super Spacer is uniquely suited for use with modern, high-speed spacer processing equipment, including vertical automated lines. Backed by the expertise of our Technical Services team, Quanex and Super Spacer can help drive your business forward efficiently and with confidence.

“Super Spacer is the ideal choice for however you make your IG units,” Johnson said. “Combined with our service and support, Quanex is committed to helping you succeed, no matter the challenge.”
